Subject: EPA head Scott Pruitt says carbon dioxide is not 'primary contributor' to global warming

FYI (and recognizing that the science policy is not my area of expertise), here is a link to some reporting on the March statement - the statement itself looks to have at least two parts:

- that there is tremendous disagreement about the amount of contribution, and
- that CO2 is not the primary contributor to the warming that we see.

Comment (fwiw) - perhaps the key w/r/to the 2nd statement is somewhere in those last few words, though what I find interesting about the article (not that I'd endorse their rhetoric or conclusions) is to look at the statement juxtaposed with the statement that had been on the website, and consider whether there is a way to square the two.
